Contents

Chapter 1	**Semiconductor Materials and Physics**	**1-**
1.1	SEMICONDUCTOR MATERIALS	**1**
1.1.1	Elemental and Compound Semiconductors	**1**
1.2	INTRODUCTION TO QUANTUM MECHANICS	**2**
1.2.1	Heisenberg's Uncertainty Principle	**3**
1.2.2	Postulates of Quantum Mechanics	**4**
1.2.3	Schrodinger Wave Equation	**5**
1.2.4	Schrodinger Equation Applied to a Free Particle	**6**
1.2.5	Schrodinger Equation Applied to a Particle in a Potential Well	**6**
1.2.6.	Schrodinger Equation Applied to a Particle in a Potential Wall	**8**
1.3	STATISTICAL MECHANICS	**12**
1.3.1	Maxwell-Boltzmann Distribution Function	**12**
1.3.2	Fermi-Dirac Distribution Function	**12**
1.3.3	Bose-Einstein Distribution Function	**13**
1.3.4	Photons and phonons	**13**
1.4	CRYSTALLINE SOLIDS AND ENERGY BANDS	**14**
1.4.1	The Bonding of Atoms	**14**
1.4.2	Crystalline State	**15**
1.4.3	Crystal Structure	**15**
1.4.4	Terminology Related with Crystal Structure	**16**
1.4.5	Important Cubic Crystal Structures	**16**
1.4.6	Crystal Axes and Planes	**19**
1.5	ENERGY BANDS IN SOLIDS	**21**
1.5.1	Energy Band Diagram of Insulator, Semiconductor and Metal	**23**
1.5.2.	Direct and Indirect Band Gap Semiconductors	**24**
1.5.3	Effective Mass	**25**
1.5.4	Conduction by Holes	**27**
1.6	INTRINSIC SEMICONDUCTOR	**28**
1.6.1	Valence Bond Model	**29**
1.7	EXTRINSIC SEMICONDUCTOR	**30**
1.7.1	n-type Semiconductors	**30**
1.7.2	p-type Semiconductor	**32**
1.8	CARRIER CONCENTRATION	**33**
1.8.1	Fermi-Dirac Distribution Function Applied to Semiconductors	**36**
1.8.2.	Electron and Hole Concentration at Equilibrium	**37**
1.8.3	Temperature Dependence of Intrinsic Carrier Concentration	**41**
1.8.4	Temperature Dependence of Majority Carrier Concentration in Extrinsic Semiconductor	**43**

1.8.5	Equilibrium Electron Hole Concentrations and Charge Neutrality	**44**
1.9	CARRIER TRANSPORT IN SEMICONDUCTORS-MOBILITY AND CONDUCTIVITY	**47**
1.9.1	Compensation	**50**
1.9.2	Thermal relaxation time	**52**
1.9.3	Scattering Mechanisms	**53**
1.9.4	Variation of Mobility with Temperature	**54**
1.9.5	Variation of Mobility with Doping	**54**
1.10	CONSTANCY Of FCRMI LEVEL AT EQUILIBRIUM	**55**
1.11	HALL EFFECT	**56**
1.12	HIGH FIELD EFFECTS	**59**
1.13	EXCESS CARRIERS IN SEMICONDUCTORS	**60**
1.13.1	Photo Generation	**60**
1.13.2	Low-level and High Level Injections	**63**
1.13.3	Excess Carrier Lifetime (Transient Decay of Excess EHP) - Direct Recombination	**63**
1.13.4	Steady-State Carrier Generation	**64**
1.13.5	Quasi Fermi Levels	**65**
1.13.6	Recombination Mechanisms	**67**
1.13.7	Origin of Recombination Centres	**69**
1.13.8	Diffusion of Charge Carriers	**70**
1.13.9	Energy Band Diagram of a Semiconductor with Applied Electric Field	**73**
1.13.10	Einstein Relations	**74**
1.13.11	Continuity Equation (Effect of Diffusion and Recombination)	**75**
1.13.12	Steady-State Carrier Injection and Diffusion Length	**76**
1.13.13	Built in field	**78**
1.13.14	Minority Carrier Injection-Drift And Diffusion Currents	**79**
1.13.15	Gradient in Quasi-Fermi Levels	**81**
1.13.16	Haynes Schockley Experiment	**81**
	Points to Remember	**106**
	Exercise Problems	**108**
	Review Questions	**111**
Chapter II	**Introduction To Fabrication Technology**	**115-147**
2.1	MATERIAL PREPARATION	**115**
2.1.1	Purification of Silicon	**115**
2.1.2	Crystal Growth	**115**
2.1.3	Crystal Slicing and Wafer Preparation	**118**
2.2	FABRICATION PROCESSES	**119**
2.2.1	Thermal Oxidation	**119**
2.2.2	Diffusion	**120**
2.2.3	Ion Implantation	**125**
2.2.4	Epitaxial Growth	**127**
2.2.5	Other Deposited Layers	**128**
2.2.6	Isolation	**129**
2.2.7	Masking and Lithography	**131**
2.2.8	Pattern Definition	**133**

2.2.9	Metallisation and Interconnection	**133**
2.3	FABRICATION PROCESS SEQUENCE FOR BASIC DEVICES	**135**
2.3.1	Sequence of Diode Fabrication	**135**
2.3.2	Sequence of Discrete BJT Fabrication	**136**
2.3.3	Sequence of CMOS Fabrication	**137**
2.3. 4	Fabrication of Resistors	**138**
2.3.5	Fabrication of Capacitors	**140**
	Points to Remember	**144**
	Exercise Problems	**145**
	Review Questions	**146**
Chapter III Junction Diodes		**149-259**
3.2	P-N JUNCTION UNDER THERMAL EQUILIBRIUM	**150**
3.2.1	Equilibrium Energy Band Diagram	**153**
3.2.2	Distribution of Carrier Concentration, Potential, Electric Field and Charge Density	**156**
3.2.3	The Built-in Potential	**158**
3.2.4	Electric Field	**162**
3.2.5	Potential Distribution	**163**
3.2.6	Width of Depletion Layer	**164**
3.3	BIASING OF P-N JUNCTION	**167**
3.3.1	Energy band diagram of biased p-n junction	**169**
3.3.2	Qualitative Description of Current Flow Through a Diode	**170**
3.4	THE IDEAL DIODE EQUATION	**171**
3.4.1	Minority and Majority Carrier Currents	**175**
3.4.2	More General Form of Diode Equation	**178**
3.5	REAL DIODES	**179**
3.5.1	Generation and Recombination Current	**180**
3.5.2	Electric Field in the Quasi Neutral N and P Regions	**180**
3.5.3	I-V-characteristics of real diodes	**181**
3.5.4	High-Level Injection Effects	**184**
3.6	DEPLETION LAYER CAPACITANCE	**186**
3.6.1	Equilibrium Depletion Layer Capacitance	**186**
3.7	LINEARLY GRADED JUNCTION	**189**
3.7.1	Built-in Voltage	**189**
3.7.2	Electric Field and Potential Distributions	**190**
3.7.3	Junction Capacitance	**192**
3.8	ELECTRICAL BREAKDOWN IN P-N JUNCTIONS	**194**
3.8.1	Zener Breakdown	**194**
3.8.2	Avalanche Breakdown	**195**
3.8.3	Comparison Between Zener and Avalanche Breakdown	**197**
3.8.4	Punched Through Diode	**198**

3.8.5	Application of Breakdown Diodes	**200**
3.9	TRANSIENT AND AC CONDITIONS	**200**
3.9.1	Time Variation of Stored Charge	**200**
3.9.2	Reverse Recovery Transient	**203**
3.9.3	Measurement of t_{sd}	**205**
3.9.4	Capacitance Due to Charge Storage (C_s)	**206**
3.9.5	Small Signal Equivalent Circuit	**207**
3.10	METAL SEMICONDUCTOR CONTACT	**208**
3.10.1	Ideal Metal Semiconductor Contact	**208**
3.10.2	Depletion Layer Capacitance	**211**
3.10.3	Forward Characteristics of Metal Semiconductor Junction	**212**
3.10.4	Metal p Type Semiconductor Schottky Diode	**214**
3.10.5	Comparison between Schottky diode and p-n junction diode	**214**
3.11	PHOTODIODE	**216**
3.11.1	Solar Cell	**216**
3.12	LIGHT EMITTING DIODES	**220**
3.12.1	LED Materials	**221**
3.13	VARACTOR DIODE	**221**
3.14	TUNNEL DIODE	**222**
	Solved Problems	**225**
	Points to Remember	**251**
	Exercise Problems	**254**
	Review Questions	**257**
Chapter IV Bipolar Junction Transistors		**260-337**
4.1	FABRICATION OF MONOLITHIC BJT	**261**
4.2	MODES OF OPERATION	**263**
4.3	CURRENT COMPONENTS	**263**
4.4	TERMINAL CURRENTS	**264**
4.5	BASIC PERFORMANCE PARAMETERS	**264**

4.6	ENERGY BAND DIAGRAM	**268**
4.7	MINORITY CARRIER DISTRIBUTION	**269**
4.8	DERIVATION OF TERMINAL CURRENTS	**270**
4.8.1	DC Parameters	**273**
4.9	CIRCUIT ARRANGEMENTS OF TRANSISTOR	**277**
4.10	THE EBERS MOLL MODEL	**278**
4.11	REGIONS OF OPERATION AND MINORITY CARRIER DISTRIBUTION	**281**
4.12	REAL TRANSISTOR	**283**
4.12.1	Carrier Recombination in the Emitter-Base Depletion Layer	**283**
4.12.2	Drift in the Base Region	**284**
4.12.3	Effect of Bias to Collector-Base Junction (Early Effect)	**285**
4.12.4	Avalanche Multiplication in the Collector-Base Depletion Region	**286**
4.12.5	Resistance of the Base Region and Emitter Crowding	**287**
4.12.6	Non-Ideality of Structure	**287**
4.12.7	Kirk Effect	**289**
4.13	TRANSISTOR CHARACTERISTICS	**290**
4.13.1	Common-base configuration	**290**
4.13.2	Common-Emitter Configuration	**292**
4.14	SWITCHING	**296**
4.14.1	Charge Control Equations	**299**
4.14.2	Tum-ON-Time	**300**
4.14.3	Turn-OFF Time	**302**
4.15	SMALL SIGNAL EQUIVALENT CIRCUIT	**205**
4.16	FIGURE OF MERIT	**307**
4.17	GUMMEL-POON MODEL	**309**

	Solved Problems	**313**
	Points to Remember	**335**
	Review Questions	**336**
Chapter V Field Effect Transistors		**338-415**
5. 1	JUNCTION FIELD EFFECT TRANSISTOR	**338**
5.1.2	Static I-V Characteristics (Derivation)	**345**
5.1.4	Small Signal equivalent circuit	**350**
5.1.3	Real JFETs	**351**
5.2	METAL SEMICONDUCTOR FIELD EFFECT TRANSISTOR	**353**
5.2.1	Fabrication of MESFET	**353**
5.2.3	Pinch-off Voltage	**354**
5.2.4	Mobility Models	**358**
5.3	METAL OXIDE SEMICONDUCTOR SYSTEMS	**359**
5.3.1	MOS Capacitor	**359**
5.3.2	C-V characterirtics of Ideal MOS System	**365**
5.3.3	Real MOS Systems	**370**
5.4	METAL OXIDE SEMICONDUCTOR FIELD EFFECT TRANSISTOR (MOSPET)	**375**
5.4.1	Fabrication of MOSFET	**377**
5.4.2	Principle of Operation	**378**
5.4.3	I-V Characteristics (Derivation)	**380**
5.4.4	Real MOSFET	**383**
5.4.6	Small Signal Equivalent Circuit	**390**
5.4.7	Figure of Merit(f_T)	**391**
	Solved Problems	**395**
	Points to Remember	**409**

	Review Questions	**413**
Chapter VI Miscellaneous Devices		**416-437**
6.1	DIAC	**416**
6.2	SILICON CONTROLLED RECTIFIER (SCR)	**417**
6.2.1	Principle of Operation	**418**
6.2.2	Forward Blocking	**418**
6.2.3	Triggering of SCR (with $I_G = 0$) (Forward conduction)	**420**
6.2.4	Reverse Blocking	**420**
6.2.5	Triggering by Gate Current	**420**
6.2.6	The $\frac{dv}{dt}$ Triggering	**421**
6.2.7	Turning OFF of SCR	**421**
6.2.8	Advantages and Disadvantages of SCR	**422**
6.3	TRIAC	**422**
6.4	HETEROJUNCTION	**424**
6.4.1	HBT	**425**
6.5	INSULATED GATE BIPOLAR TRANSISTOR (IGBT)	**426**
6.5	LASER DIODE	**428**
6.6.1	Population Inversion	**429**
6.7	UNI JUNCTION TRANSISTOR (UJT)	**431**
6.7.1	Principle of Operation	**432**
6.8	CHARGE COUPLED DEVICES	**433**
	Review Questions	**436**
	Appendix II	**438**
	Appendix III & IV	**439**
	Appendix V & VI	**440**

Appendix VII & VIII **441**

Appendix X **442**

Bibliography **446**
